Delivery Instructions

Equipment and supplies | Onshore and offshore

Deliveries to TGS (or a freight forwarder) must follow these instructions.

Please read and comply with these instructions.

Failure to comply may result in the delivery being returned at the supplier's risk and cost.

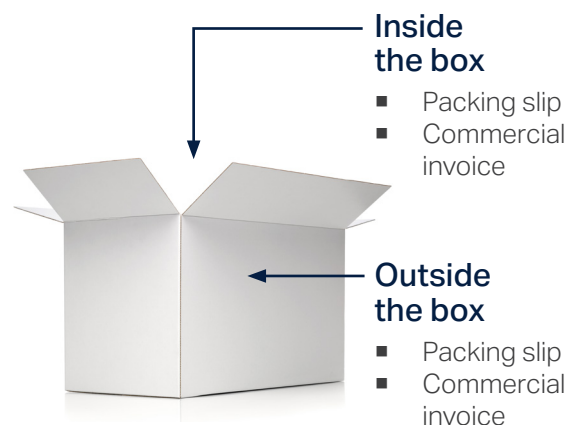

We need your help to succeed.

Guidelines for delivery

1. The supplier must deliver in accordance with the instructions in the TGS purchase order (PO). Our PO will specify either a pick up instruction or a delivery address, dependent on agreed delivery terms. Deliveries to a TGS vessel in transit must specify the vessel name as this is the end destination.
2. The shipment should contain all goods defined in the PO for that delivery. Part delivery is only allowed on approval by TGS procurement.
3. The goods delivered, and all delivery documentation, should correspond exactly to TGS' purchase order description.
 - If the PO specifies 100 bolts, then the order confirmation, packing slip and invoice must also specify 100 bolts (not 1 packet of bolts).
 - Items ordered in whole units (packets, boxes etc.) must be delivered in those units.
 - Item numbers on packing slip/invoice shall be the same as given on the PO.
4. PO items must be packed according to industry standard, clearly marked with the PO reference, vessel name and department. Wooden packaging must follow ISPM15 regulations. The delivery must include two copies of the commercial invoice/invoice/ packing slip – one inside the package and one outside, plus a list of contents of the delivery identical to our PO / item numbers. The external packing slip must be waterproof.
5. Commercial invoice and packing slip should, at a minimum, include:
 - Manufacturer name
 - Address
 - Phone number
 - Part description in English
 - Quantity, value, gross weight and net weight per line item
 - ECCN
 - EIN#
 - COO (country of origin)
 - Signature
 - Schedule B/HTS code.
6. A copy of all documentation related to a delivery should be included inside each package included in the delivery. This may include consignment note, pick-up address, number of packages (including weight of each), and packing slip specifying the total value, certificates, declarations and safety sheets.

All documentation should be in English.
7. The supplier shall provide the freight forwarder with all relevant shipping documentation necessary for collection: e.g. commercial invoice, invoice, weight and dimension of the shipment, number of packages and collection address.
8. Dangerous goods must be packed separately and marked as such. A copy of the Material Safety Data Sheet (MSDS) must be enclosed.
9. Delivery shall take place at the agreed delivery time. Failure to deliver at the agreed delivery time may result in penalties related to increased costs of storage, extra resource use, or postponement of planned activities.

How to label and mark your shipment

Mark deliveries according to TGS PO

1. Vessel name

2. Freight forwarder or delivery address

3. PO reference

4. Invoice address
